

# New from Almi

## The AL 43KSH hydraulic sand-lime block cutter

Can you cut sand-lime blocks at any angle in just a fraction of a second? You can now, with Almi's new AL 43KSH.

And you benefit from more than just the higher speed in comparison with the customary techniques:

1. No expensive saw blades to replace.
2. No noise.
3. No dust.
4. No water required so no problems with the pump caused by frozen or dirty water.

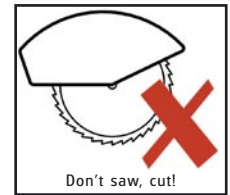

The blocks are lifted from the pallet, placed in the machine - and then angled, positioned with the greatest of ease, and cut with just one press of a button (see other side).

Other than the power consumption no further costs are incurred - and you speed the construction process, shorten the rough-work phase and reduce the construction costs.

## The AL 43KSH hydraulic sand-lime block cutter

1. Block is placed on the machine.

2. The shaft with joint is close to the centre of gravity of the block, so it's easy to overturn.

3. Position the block with the greatest of ease.

4. Push the button.
